

Ideation Phase

Brainstorm & Idea Prioritization

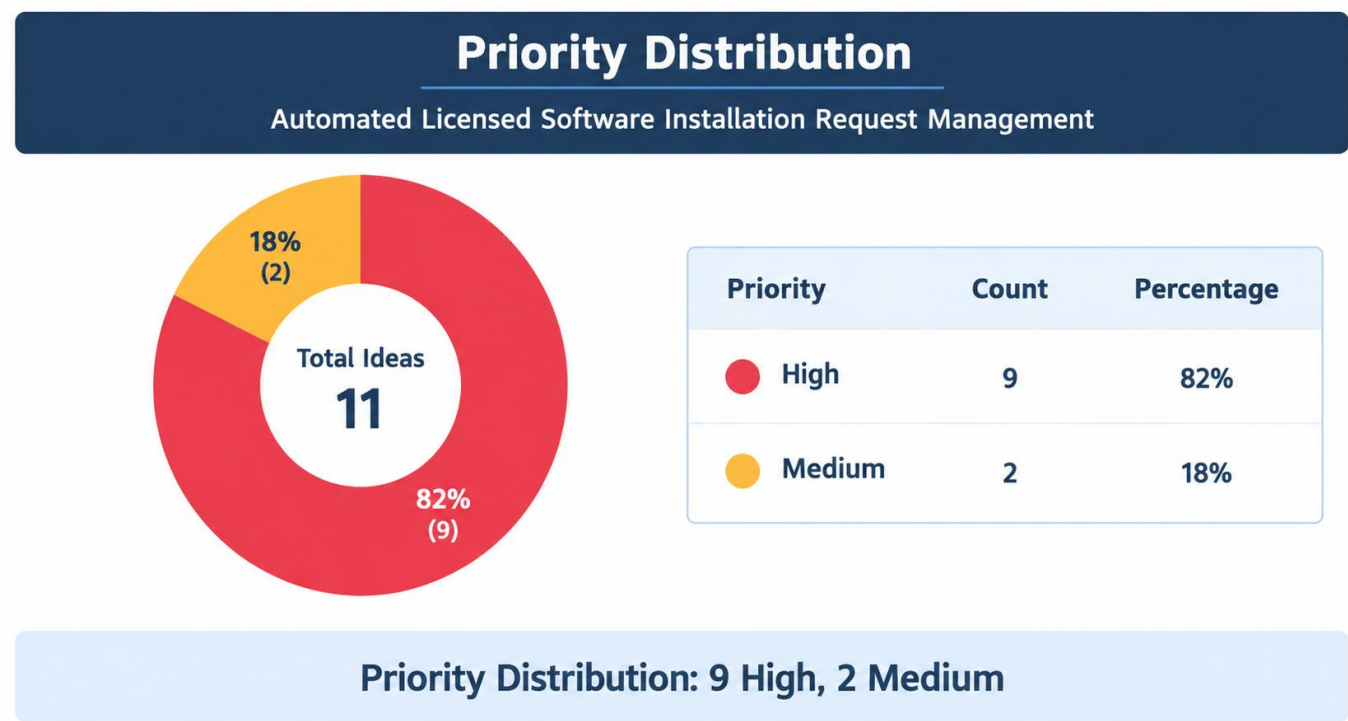

Date	10 September 2026
Student Name	Yuvasri Malla
Project Name	Automated Licensed Software Installation Request Management
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization

The project brainstorm focuses on creating a centralized ServiceNow-based licensed software request management system for employees. The solution handles software requests through the Service Catalog, captures structured request information, supports dynamic form behavior, automates manager approvals, creates fulfillment tasks for the software/IT team, provides notifications and request status tracking, and supports reporting for software requests and license utilization.

Idea	Group	Priority
Service Catalog	User Request Management	High
Licensed Software Request Catalog Item	User Request Management	High
Custom Licensed Software Database Table	Data Management	High
Software Installation Task Management	Task Management	High
Catalog Variables	Structured Data Capture	High
Catalog UI Policies	User Experience	High
Approval Automation	Workflow Automation	High
Automated Software Installation Task Creation	Workflow Automation	High
Assignment to Software Fulfillment Team	Task Management	High
Email Notifications	Communication	Medium
Request Status Tracking	Monitoring	High
Reports and Dashboards	Analytics	Medium

Prioritized Brainstorm Representation

Priority distribution: 10 High, 2 Medium

Ideation Outcome

The prioritized ideas establish the core scope of the project. High-priority items form the minimum functional solution: a Service Catalog request, structured data capture, approval automation, automated fulfillment task creation, team assignment, and request tracking. Medium-priority items enhance communication and analytics through notifications, reports, and dashboards.
