Project Name	Automated Licensed Software Installation Request Management
Maximum Marks	4 Marks

Empathy Map Canvas

Dimension	Employee / End User Perspective
Says	I need a simple and quick way to request licensed software through one centralized ServiceNow catalog.
Thinks	I want only relevant software options, clear license information, and a guided request form that tells me what details are required.
Does	Opens the Service Portal, selects the Licensed Software Request catalog item, chooses the software, enters the required details, and submits the request.
Feels	Wants a fast, reliable, secure, and transparent software request experience with clear approval and installation status.
Pain Points	Incomplete request information, unclear software choices, approval delays, manual license checks, delayed installation, and limited request-status visibility.
Needs / Goals	Guided request submission, complete information capture, license availability validation, automated approvals and fulfillment tasks, timely notifications, and end-to-end status tracking.

Licensed Software Installation — Empathy Map

Figure 1: Employee perspective empathy map representation for the Licensed Software Installation Request Management project.

MAIN POINTS

Incomplete requests • unclear software choices • approval delays • manual license checks • delayed installation • limited status visibility
