Problem–Solution Fit

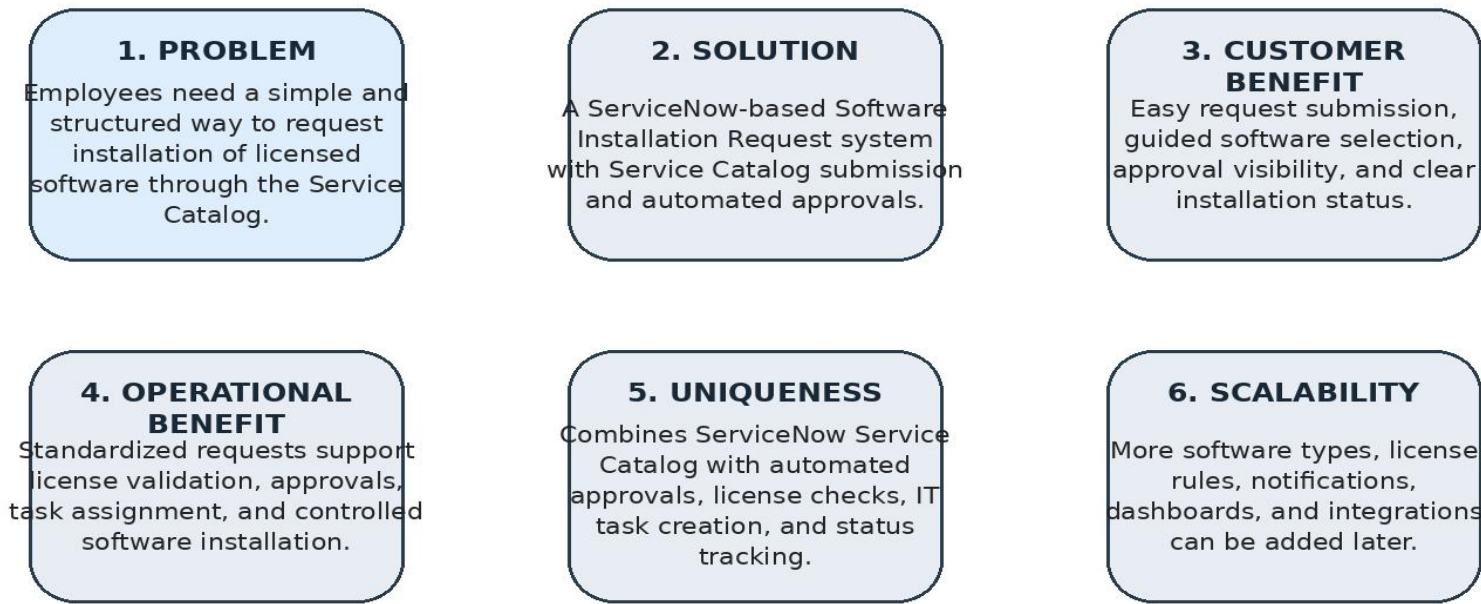

Figure 1: Problem–solution fit canvas for the Automated Licensed Software Installation Request Management.

Parameter	Project Fit
Problem	Employees need a simple and structured way to request installation of licensed software through the Service Catalog.
Solution	A ServiceNow-based Software Installation Request Management system with Service Catalog submission, automated approvals, and installation task assignment.
Customer Benefit	Easy request submission, guided software selection, approval visibility, and clear installation status tracking.
Operational Benefit	Standardized requests support license validation, efficient approvals, task assignment, and controlled software installation
Uniqueness	Combines ServiceNow Service Catalog with automated approvals, license checks, IT task creation, and request status tracking.
Scalability	Additional software types, license validation rules, automation, notifications, dashboards, and integrations can be added later.
