Project Name	Licensed Software Installation Request Management
Maximum Marks	4 Marks

Technical Architecture

Technology Stack & Layered Architecture (SIRA – Software Installation Request Management)

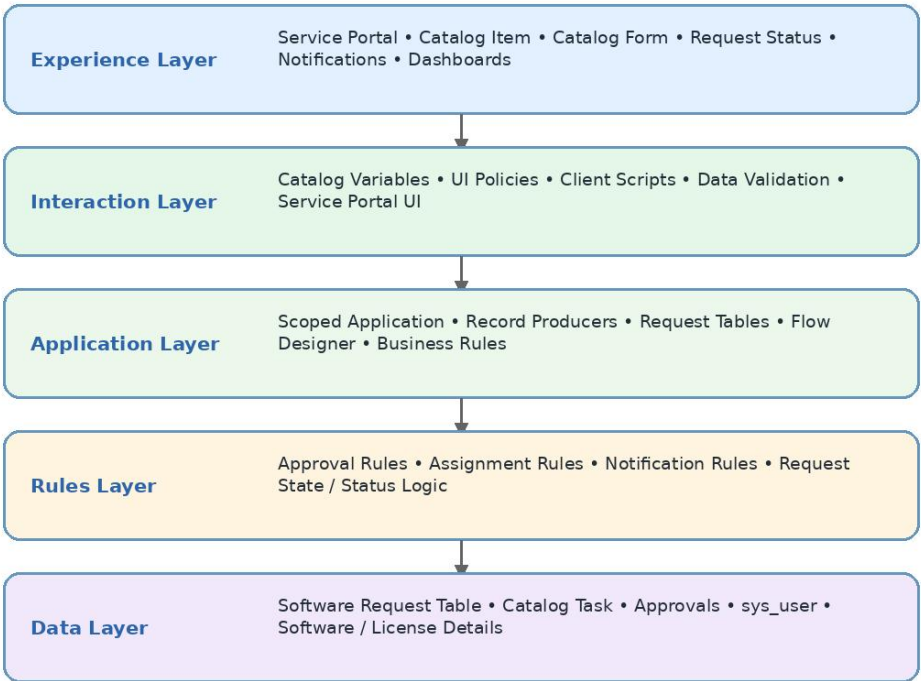

Figure 1: Layered architecture for the SIRA Software Installation Request Management System.

S.No.	Component	Description	Technology
1	User Interface	Employee-facing interface for submitting and tracking licensed software installation requests.	Service Portal / Service Catalog
2	Application	Handles software request creation, catalog processing, approvals, and request lifecycle.	ServiceNow Scoped Application / Catalog Item
3	Rules	Controls mandatory fields, dynamic form behavior, validation, approvals, and notifications.	UI Policies / Client Scripts / Business Rules
4	Data	Stores software request details, user information, approvals, and fulfillment task records.	Request Table / Catalog Task / sys_user
5	Automation	Automates approvals, assignment, task creation, status updates, and notifications.	Flow Designer / Approvals / Notifications
6	Fulfillment	Assigns installation work and tracks fulfillment until the software request is completed.	Catalog Tasks / Assignment Groups

Architecture Summary

The SIRA solution follows a layered servicenow architecture. The Experience Layer provides the catalog and request-tracking experience; the Interaction Layer manages variables and dynamic form behavior; the Application and Rules Layers manage request processing, validation, approvals and notifications; and the Data Layer stores request, user, approval and fulfillment information.
